

## ARCHITECTURAL VERTICAL PULLS

## BURNS Manufacturing

For over 50 years, Burns has been manufacturing door hardware and providing customers with a wide variety of high-quality architectural door trim. Decades of manufacturing experience have allowed us to develop the techniques and skills required to produce aesthetically appealing and functional solutions to customer challenges. Our main focus is to continually improve our designs and efficiency so we are able to offer you outstanding product quality and value for many years to come.

### CUSTOM CAPABILITIES

We take great pride in manufacturing custom products created for architects, contractors and building owners throughout the world. Our design team can customize many of our cataloged products and existing designs or create an entirely new design based on your specifications. Custom products are produced with an emphasis on quality, precision and elegant appeal. Most designs can be engineered to a finished product within just a few weeks.

### VP OPTIONS

By combining modern design and manufacturing techniques with expert craftsmanship, we are able to produce a visually appealing yet durable and dependable pull handle. Our fabricating process provides the flexibility to customize to your specifications or create unique finishes, non-standard diameters and reliable mountings to complement distinctive architectural designs. All of our pulls meet or exceed BHMA industry standards.

### SF – SPLIT FINISH

This design supplies high-polished ends with a satin-finish center that offers an exciting modern look. This split finish helps conceal scratches that occur on a highly used entrance that demands high-polished pulls. When ordering, add suffix “**SF**” behind the VP Series product number to receive this attractive option.

### PC – POWDER COAT

Using an exterior grade powder with supreme UV test results, makes these pulls very durable for day-to-day use. It also will give your openings that new modern architectural look. Flat Black is our most popular color and other colors are available. When ordering, add suffix “**PC**” behind the VP series product number to receive this option.

### W – WOOD

Our 6000 series of pulls are made with various North American species of wood to supply the natural beauty and warmth that only real wood can give. The ends can be made in any architectural finish to match other door hardware that is nearby. Other wood options include our hard durable clear coat, or finish sanded wood to be stained on the jobsite. Any of these options that you pick will make a true statement! When ordering, add suffix “**W**” behind the VP series product number to receive this option.

### L – LEATHER WRAPPED

Our leather-wrapped option is hand sewn here in northwestern Pennsylvania with quality workmanship and the highest of standards. Featuring both interior and exterior applications, this option will surpass your expectations. We offer two types of leather – upholstery and bridle, and have two standard colors – brown and black. Other colors are available upon request. When ordering, add suffix “**L**” behind the VP Series product number to receive this distinctive option.

For more information on our options, please visit us at [www.burnsmfg.com](http://www.burnsmfg.com).

# 4000 SERIES: VERTICAL

The rugged construction of the 4000 Series offers a vertical pull design that allows flexibility for use in a variety of door openings. Non-standard diameters, finishes and mountings are available for making this series architecturally dynamic.
